

SPACE SAVER KIT TRAP INLET

WARNING

We shall not be responsible or liable for any failure of, or damage to, this plumbing product caused by the use of chlorine/bleach cleaners or related products added to the tank water. Use of such products will void the warranty and may result in product failure, possibly causing property damage. Do not over tighten plastic nuts and always turn off water supply when installing / removing toilet cistern parts.

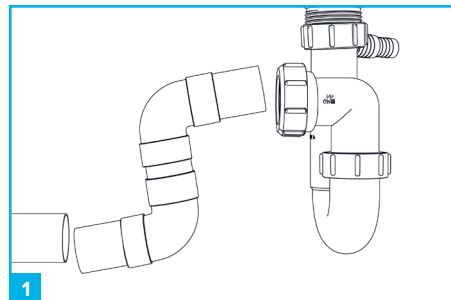

Please note: Save this instruction sheet for future reference
IMPORTANT: DO NOT use plumber's putty to seal this fitting

INSTALLATION INSTRUCTIONS

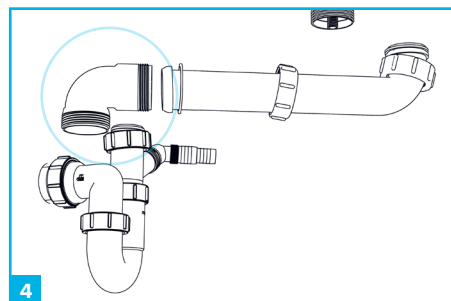

1 Start by disconnecting your trap and removing any surplus pipe work between it and the outlet.

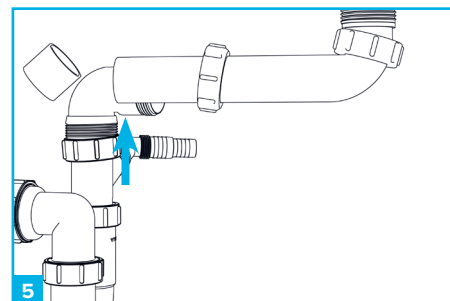

2 In order to save as much space as possible, cut the outlet pipe as short as possible. To do this, line up your trap with its outlet against the back of the unit and cut the pipe where the trap outlet narrows. Smooth the cut edge with a piece of sand paper or file.

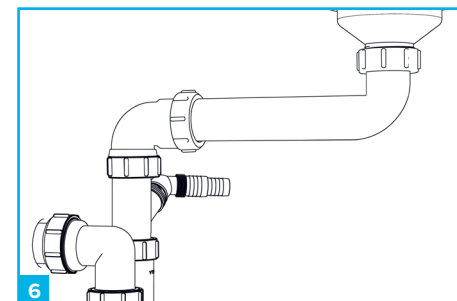

3 Attach the trap to the outlet pipe, by removing the nut, slip ring and conical washer, placing them over the outlet pipe and then screwing onto the trap outlet thread.

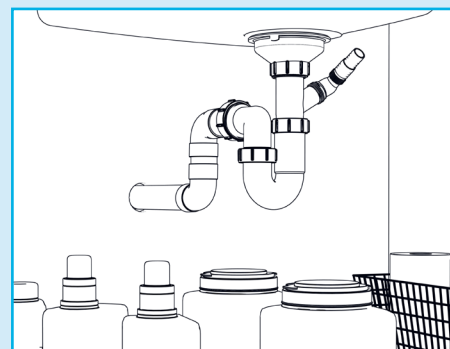

4 Now the trap is ready for the space saver kit. Take the 90° bend and attach loosely to the top of your trap.

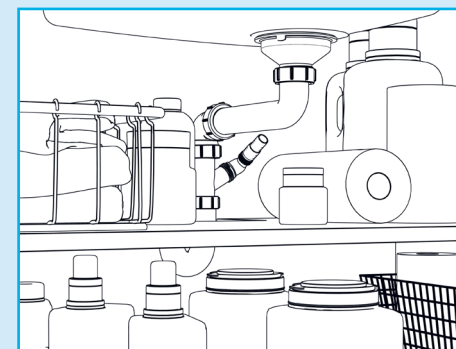

5 Now you need to cut the pipe section to suit. Connect the pipe section of the kit to the bottom of the waste. Mark and cut the pipe section just short of where the 90° bend narrows.

6 Now Insert the pipe section into the 90° bend and tighten all nuts for a watertight seal.
